1.0 GENERAL DESCRIPTION

1.1 Introduction

NV173FHM-N4G V8.0 is a color active matrix TFT LCD module using amorphous silicon TFT's (Thin Film Transistors) as an active switching devices. This module has a 17.3 inch diagonally measured active area with Full-HD resolutions (1920 horizontal by 1080 vertical pixel array). Each pixel is divided into RED, GREEN, BLUE dots which are arranged in vertical stripe and this module can display 16.7M(8bit) colors and color gamut 45%. The TFT-LCD panel used for this module is a low reflection and higher color type. Therefore, this module is suitable for Notebook PC. The LED driver for back-light driving is built in this model.

All input signals are eDP1.2 interface compatible.

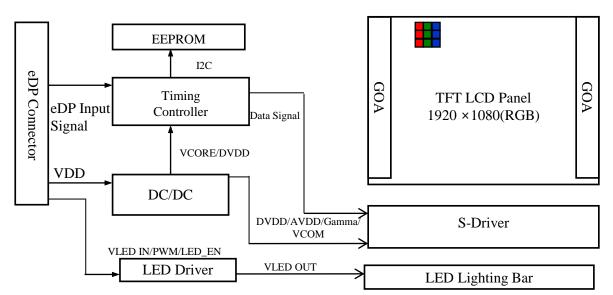

Figure 1. Drive Architecture

1.2 Features

- 2 lane eDP interface with 2.7Gbps link rates
- Thin and light weight
- 16.7M(8bit) color depth, color gamut 45%
- Single LED lighting bar (Bottom side/Horizontal Direction)
- Data enable signal mode
- Green product (RoHS & Halogen free product)
- On board LED driving circuit
- Low driving voltage and low power consumption
- On board EDID chip
- DPCD Version 1.1

2.0 ABSOLUTE MAXIMUM RATINGS

The followings are maximum values which, if exceed, may cause faulty operation or damage to the unit. The operational and non-operational maximum voltage and current values are listed in Table 2.

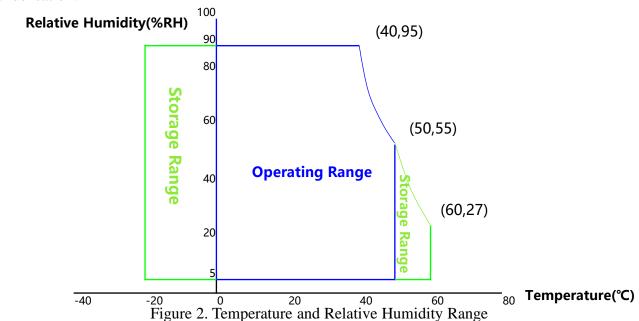

< Table 2. Absolute Maximum Ratings>

| To-25 | / つ º | |
|---------|--------------|---|
| 1a=23+6 | -2 | C |

| Parameter | Symbol | Min. | Max. | Unit | Remarks | |
|-----------------------|-----------------|----------------------|----------------------|------|---------|--|
| Power Supply Voltage | $V_{ m DD}$ | -0.3 | 4.0 | V | | |
| eDP input Voltage | $V_{	ext{eDP}}$ | 0 | 2.0 | V | Note 1 | |
| Logic Supply Voltage | V _{IN} | V _{ss} -0.3 | V _{DD} +0.3 | V | | |
| Operating Temperature | T _{OP} | 0 | +50 | °C | Nata 2 | |
| Storage Temperature | T _{ST} | -20 | +60 | °C | Note 2 | |

Notes:

- 1. Permanent damage to the device may occur if maximum values are exceeded functional operation should be restricted to the condition described under normal operating conditions.
- 2. Temperature and relative humidity range are shown in the figure below.
- 95 % RH Max. (40 °C \geq Ta) Maximum wet bulb temperature at 39 °C or less. (Ta > 40 °C) No condensation.

4.0 OPTICAL SPECIFICATION

4.1 Overview

The test of optical specifications shall be measured in a dark room (ambient luminance ≤ 1 lux and temperature $= 25\pm 2^{\circ}\text{C}$) with the equipment of luminance meter system (PR730&PR810) and test unit shall be located at an approximate distance 50cm from the LCD surface at a viewing angle of θ and Φ equal to 0°. We refer to $\theta \emptyset = 0$ (= θ 3) as the 3 o'clock direction (the "right"), $\theta \emptyset = 90$ (= θ 12) as the 12 o'clock direction ("upward"), $\theta \emptyset = 180$ (= θ 9) as the 9 o'clock direction ("left") and $\theta \emptyset = 270$ (= θ 6) as the 6 o'clock direction ("bottom"). While scanning θ and/or \emptyset , the center of the measuring spot on the display surface shall stay fixed. The backlight should be operating for 30 minutes prior to measurement. VDD shall be 3.3+/- 0.3V at 25°C. Optimum viewing angle direction is 6 'clock.

|-----|---------------|--------|------------|
| | Customer Spec | Rev. 0 | 2021.01.26 |

Notes:

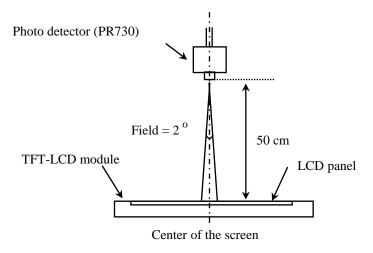

- 1. Viewing angle is the angle at which the contrast ratio is greater than 10. The viewing angles are determined for the horizontal or 3, 9 o'clock direction and the vertical or 6, 12 o'clock direction with respect to the optical axis which is normal to the LCD surface (see Figure 7).
- 2. Contrast measurements shall be made at viewing angle of Θ = 0 and at the center of the LCD surface. Luminance shall be measured with all pixels in the view field set first to white, then to the dark (black) state . (see Figure 7) Luminance Contrast Ratio (CR) is defined mathematically.

- 3. Center Luminance of white is defined as luminance values of 5 point average across the LCD surface. Luminance shall be measured with all pixels in the view field set first to white. This measurement shall be taken at the locations shown in Figure 8 for a total of the measurements per display.
- 4. The White luminance uniformity on LCD surface is then expressed as : ΔY =Minimum Luminance of 5(or 13) points / Maximum Luminance of 5(or 13) points.(see Figure 8 and Figure 9).
- 5. The color chromaticity coordinates specified in Table 5 shall be calculated from the spectral data measured with all pixels first in red, green, blue and white. Measurements shall be made at the center of the panel.
- 6. The electro-optical response time measurements shall be made as Figure 10 by switching the "data" input signal ON and OFF. The times needed for the luminance to change from 10% to 90% is T_f , and 90% to 10% is T_r .
- 7. Cross-Talk of one area of the LCD surface by another shall be measured by comparing the luminance (YA) of a 25mm diameter area, with all display pixels set to a gray level, to the luminance (YB) of that same area when any adjacent area is driven dark. (See Figure 11).

4.3 Optical Measurements

Optical characteristics measurement setup

Figure 7. Measurement Set Up

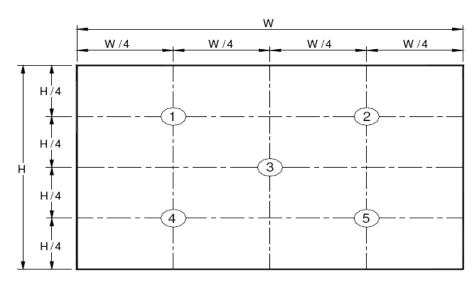

Figure 8. White Luminance and Uniformity Measurement Locations (5 points)

Center Luminance of white is defined as luminance values of center 5 points across the LCD surface. Luminance shall be measured with all pixels in the view field set first to white. This measurement shall be taken at the locations shown in Figure 7 for a total of the measurements per display.

| SPEC. NUMBER | SPEC. TITLE | PAGE |

|-----|---------------|--------|------------|
| | Customer Spec | Rev. 0 | 2021.01.26 |

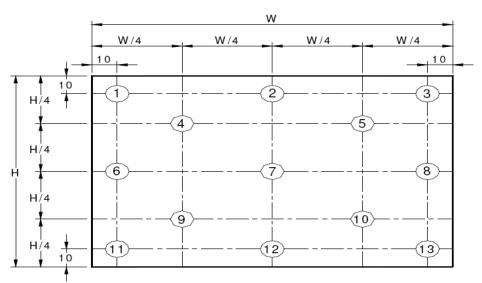

Figure 9. Uniformity Measurement Locations (13 points)

The White luminance uniformity on LCD surface is then expressed as : $\Delta Y5 = Minimum Luminance$ of five points / Maximum Luminance of five points (see Figure 8), $\Delta Y13 = Minimum Luminance$ of 13 points /Maximum Luminance of 13 points (see Figure 9).

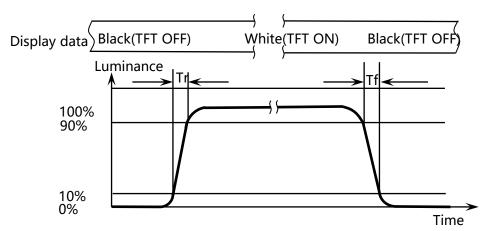

Figure 10. Response Time Testing

The electro-optical response time measurements shall be made as shown in Figure 10 by switching the "data" input signal ON and OFF. Tr: The luminance to change from 10% to 90%, Tf: The luminance to change from 90% to 10%.

The test system: LMS PR810

Cross Talk (%) =
$$\left| \frac{Y_B - Y_A}{Y_A} \right| \times 100$$

Figure 11. Cross Talk Modulation Test Description

Where:

 Y_A = Initial luminance of measured area (cd/m²)

 $Y^{}_{B} = Subsequent luminance of measured area (cd/m^2)$

The location 1/2/3/4 measured will be exactly the same in both patterns. The test background gray is from L64 to L192. Take the largest data as the result.

Cross Talk of one area of the LCD surface by another shall be measured by comparing the luminance (YA) of a 25mm diameter area, with all display pixels set to a gray level, to the luminance (YB) of that same area when any adjacent area is driven dark.(Refer to Figure 11) The test system: PR730

8.0 POWER SEQUENCE

To prevent a latch-up or DC operation of the LCD module, the power on/off sequence shall be as shown in below.

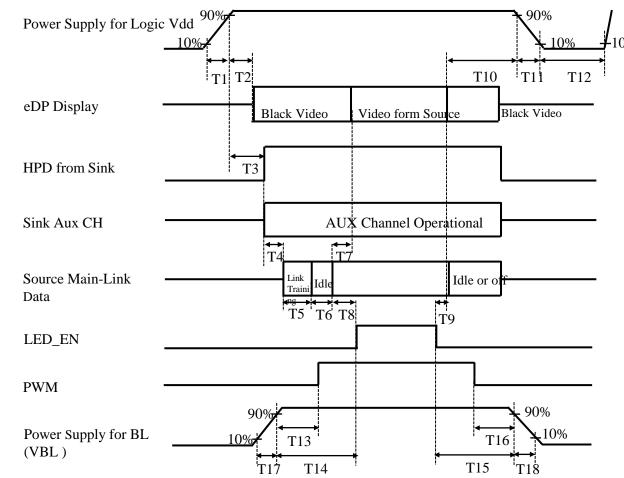

Figure 18. Power Sequence

- \bullet 0.5ms \leq T1 \leq 10 ms
- \bullet 0ms < T2 \leq 200 ms
- \bullet 0ms < T3 \leq 200 ms
- T4+T5+T6+T8>80ms
- \bullet 0ms < T7 \le 50ms
- 50ms < T80ms < T9

- $500 \text{ms} \leq \text{T}12$
- 0ms < T13
- 0ms < T14
- 0ms < T15
- 0ms < T16

Notes:

- 1. When the power supply VDD is 0V, keep the level of input signals on the low or keep high impedance.
- 2. Do not keep the interface signal high impedance when power is on. Back Light must be turn on after power for logic and interface signal are valid.

9.0 Connector Description

Physical interface is described as for the connector on LCM.

These connectors are capable of accommodating the following signals and will be following components.

9.1 TFT LCD Module

< Table 13. Signal Connector >

| Connector Name /Description | For Signal Connector |
|-----------------------------|----------------------|
| Manufacturer | IPEX |
| Type/ Part Number | 20455-030E-66 |
| Mating Housing/ Part Number | I-PEX 20454-030T |

10.0 MECHANICAL CHARACTERISTICS

10.1 Dimensional Requirements

Figure 23 shows mechanical outlines for the model NV173FHM-N4G V8.0. Other parameters are shown in Table 14.

<Table 14. Dimensional Parameters>

| Parameter | Specification | Unit |
|---------------------|---|--------|
| Active Area | 381.888 (H) ×214.812 (V) | mm |
| Number of pixels | 1920 (H) X 1080 (V) (1 pixel = R + G + B dots) | pixels |
| Pixel pitch | 198.9 (H) X 198.9 (V) | um |
| Pixel arrangement | RGB Vertical stripe | |
| Display colors | 16.7M(8bit) | |
| Display mode | Normally Black | |
| Dimensional outline | 389.888(H)(Typ.)×227.012(V)(w/oPCB)(Typ.)×3.5(max) 389.888(H)(Typ.)×238.012(V)(w/PCB)(Typ.)×3.5(max) | mm |
| Weight | 480(max) | g |

10.2 Mounting

See Figure 24.

10.3 Anti-Glare and Polarizer Hardness.

The surface of the LCD has an Anti-Glare coating to minimize reflection and a coating to reduce scratching. Polarizer Hardness is 3H.

10.4 Light Leakage

There shall not be visible light from the back-lighting system around the edges of the screen as seen from a distance 50cm from the screen with an overhead light level of 350lux.

11.0 RELIABILITY TEST

The reliability test items and its conditions are shown in below.

<Table 15. Reliability Test>

| No | Test Items | Conditions | Remark |
|----|---|---|--------|
| 1 | High temperature storage test | Ta = 60°C, 60%RH, 240 hrs | |
| 2 | Low temperature storage test | Ta = -20°C, 240 hrs | |
| 3 | High temperature & high humidity operation test | Ta = 50°C, 80%RH, 240 hrs | |
| 4 | High temperature operation test | Ta = 50°C, 60%RH, 240 hrs | |
| 5 | Low temperature operation test | Ta = 0°C, 240 hrs | |
| 6 | Thermal shock | Ta = -20 °C \leftrightarrow 60 °C (0.5 hr), 60% ±3% RH, 100 cycle | |
| 7 | Vibration test (non-operating) | Ta = 25°C, 60%RH, 1.5G, 10~500Hz, Sine X,Y,Z / Sweep rate: 1 hour | Note 1 |
| 8 | Shock test (non-operating) | Ta = 25°C, 60%RH, 220G, Half Sine Wave 2msec±X,±Y,±Z Once for each direction | Note 1 |
| 9 | Electro-static discharge test (operating) | Air : 150 pF , 330Ω , $\pm 15 \text{ KV}$ Contact : 150 pF , 330Ω , $\pm 8 \text{ KV}$ Ta = 25° C , 60% RH, | Note 2 |

Notes:

- 1. The fixture must be hard enough, so that the module would not be twisted or bent.
- 2. Self- recovery and restart recovery is allowed. No hardware failures.

| SPEC. NUMBER | SPEC. TITLE | PAGE |

12.0 HANDLING & CAUTIONS

- (1) Cautions when taking out the module
 - Pick the pouch only, when taking out module from a shipping package.
- (2) Cautions for handling the module
 - As the electrostatic discharges may break the LCD module, handle the LCD module with care. Peel a protection sheet off from the LCD panel surface as slowly as possible.
 - As the LCD panel and back light element are made from fragile glass material, impulse and pressure to the LCD module should be avoided.
 - As the surface of the polarizer is very soft and easily scratched, use a soft dry cloth without chemicals for cleaning.
 - Do not pull the interface connector in or out while the LCD module is operating.
 - Put the module display side down on a flat horizontal plane.
 - Handle connectors and cables with care.
- (3) Cautions for the operation
 - When the module is operating, do not lose CLK, ENAB signals. If any one of these signals is lost, the LCD panel would be damaged.
 - Obey the supply voltage sequence. If wrong sequence is applied, the module would be damaged.
- (4) Cautions for the atmosphere
 - Dew drop atmosphere should be avoided.
 - Do not store and/or operate the LCD module in a high temperature and/or humidity atmosphere.
 Storage in an electro-conductive polymer packing pouch and under relatively low temperature atmosphere is recommended.
- (5) Cautions for the module characteristics
 - Do not apply fixed pattern data signal to the LCD module at product aging.
 - Applying fixed pattern for a long time may cause image sticking.
- (6) Other cautions
 - Do not disassemble and/or re-assemble LCD module.
 - Do not re-adjust variable resistor or switch etc.
 - When returning the module for repair or etc. Please pack the module not to be broken. We recommend to use the original shipping packages.

17.0 GENERAL PRECAUTIONS

17.1 HANDLING

- (1) When the module is assembled, It should be attached to the system firmly using every mounting holes. Be careful not to twist or bend the modules.
- (2) Refrain from strong mechanical shock or any force to the module. Otherwise, it may cause improper operation or damage to the module.
- (3) Note that polarizers are very fragile and could be easily damaged. Do not press or scratch the surface harder than 1 HB pencil lead.
- (4) Wipe off water droplets or oil immediately. If you leave the droplets for a long time, Staining and discoloration may occur.
- (5) If the surface of the polarizer is dirty, clean it using some absorbent cotton or soft cloth.
- (6) The desirable cleaners are water, IPA (Isopropyl Alcohol) or Hexane. Do not use Ketone type materials(ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might permanently damage to the polarizer due to chemical reaction.
- (7) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth .In case of contact with hands, legs or clothes, it must be washed away thoroughly with soap.
- (8) Protect the module from static, it may cause damage to the module.
- (9) Use fingerstalls with soft gloves to keep display clean during the incoming inspection and assembly process.
- (10) Do not disassemble the module.
- (11) Do not pull or fold the LED FPC.
- (12) Do not touch any component which is located on the back side.
- (13) Protection film for polarizer on the module shall be slowly peeled off just before use so that the electrostatic charge can be minimized.
- (14) Pins of connector shall not be touched directly with bare hands.

17.2 STORAGE

- (1) Do not leave the module in high temperature, and high humidity for a long time. It is highly recommended to store the module with temperature from 0 to 35° C and relative humidity of less than 70%.
- (2) Do not store the TFT-LCD module in direct sunlight.
- (3) The module shall be stored in a dark place. It is prohibited to apply sunlight or fluorescent light during the store.

| Customer Spec | Rev. 0 | 2021.01.26 |

17.3 OPERATION

- (1) Do not connect, disconnect the module in the "Power On" condition.
- (2) Power supply should always be turned on/off by following item 8.0 "Power on/off sequence ".
- (3) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.
- (4) The standard limited warranty is only applicable when the module is used for general notebook applications. If used for purposes other than as specified, BOE is not to be held reliable for the defective operations. It is strongly recommended to contact BOE to find out fitness for a particular purpose.

17.4 OTHERS

- (1) Avoid condensation of water. It may result in improper operation or disconnection of electrode.
- (2) Do not exceed the absolute maximum rating value. (the supply voltage variation, input voltage variation, Variation in part contents and environmental temperature, so on) Otherwise the module may be damaged.
- (3) If the module displays the same pattern continuously for a long period of time, it can be the situation when The "image sticks" to the screen.
- (4) This module has its circuitry PCB's on the rear or bottom side and should be handled carefully to avoid being stressed.

Appendix A

The Measurement Methods for the Dimensions of Module

Caliper:

- a. Length of Outline
- b. Width of Outline (Without/With PCB)
- c. Thickness of Outline (Without/ With PCB)

Coordinate Measuring Machine:

CF Polarizer Size

Active Area Size

Active Area to Outline (Without Tape Wrinkle or Bulged)

Active Area to CF Polarizer

The Distance of Bracket Holes

P-Cover to Outline (Without Tape Wrinkle or Bulged)

Length of P-Cover

Connector Pin 1 to Outline (Without Tape Wrinkle or Bulged)

Height Gauge: The Different Height of Root and Top on the Bracket

(Need to Calculate From Bracket Angle Spec.)

Feeler Gauge: The Warpage Spec. of Module

Notes:

Except the Critical Dimensions as Above, Other Dimensions are Measured by Coordinate Measuring Machine If Necessary.

Appendix B

Antenna Cable & Webcam wire

If sponge within the reflector area is necessary, we suggest that the gap b etween reflector and sponge is more than 0.5mm

Purpose

- 1. We suggest that do not set Antenna or WebCam cable / wire go behind LCM to avoid backpack test, hinge test ,twist test or pogo test with abnormal display
- 2. If the cable / wire is necessary to go behind LCM, please make a groove with rounds or chamfers to protect the cable / wire, or attach with higher sponge / rubbers adjacent to the cable / wire route
- 3. Suggest that attach the cable / wire with tapes to A-cover
- 4. Do not attach anything with LCM reflector area. If attach cable / wire with LCM reflector area, it may cause pooling, white spot, light leakage and other related issues

NV173FHM-N4G V8.0 Product Specification Rev. 0

PAGE

49 OF 65

DAS-RD-2019007-A

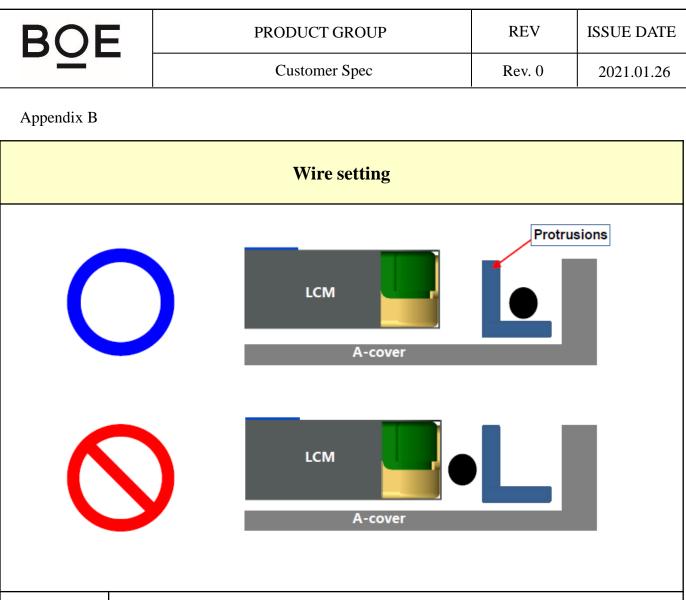

A4(210 X 297)

Purpose

- 1. LCM is fixed on A-cover by double-sided tap which can stick LCM after using the press jig stress LCM during assembling.
- 2. To avoid panel broken the design of pressure head of press jig can not only pin on cell panel. The pressure head needs to pin on the LCM frame, which the LCM frame can share the pressure of the pressing head.

| SPEC. NUMBER | PEC. NUMBER SPEC. TITLE | |
|--------------|--|----------|
| | NV173FHM-N4G V8.0 Product Specification Rev. 0 | 50 OF 65 |

Purpose

Wire should be placed between Protrusions and A-cover. If place the wire between LCM and Protrusions, it may interfere with LCM when assembling B-covers, or even cause LCM breakage in reliability test.

| Appendix C | | | | | | | | |
| HPD Signal Definition IRQ (Interrupt Request) | | | | | | | | |
| Logic Vdd 90% 10% IRQ (0.5ms to 1ms) HPD from Si | | | | | | | | |
| | Purpose When HPD signal low than 0.5ms to 1ms, the source device should check sink status field from the DPCD and take link training again. | | | | | | | |

Appendix C

Main link eye diagram of TP3

Measured TP3 on LCM connector.

| Volts | | 1 | | | 2 | | > | >3 | | |
|-------|-------|-------|-------|-------|-------------|-------|-------|-------|-------|-------|
| 0.000 | 0.100 | 0.200 | 0.300 | 0.400 | 0.500 UI | 0.600 | 0.700 | 0.800 | 0.900 | 1.000 |

Downstream Device Mask at TP3

| | UI | Voltage |
|---|-------|---------|
| 1 | 0.246 | 0 |
| 2 | 0.5 | 0.075 |
| 3 | 0.755 | 0 |
| 4 | 0.5 | -0.075 |

Eye for TP3 at HBR

| | UI | Voltage |
|---|-------|---------|
| 1 | 0.375 | 0 |
| 2 | 0.5 | 0.023 |
| 3 | 0.625 | 0 |
| 4 | 0.5 | -0.023 |

Eye for TP3 at RBR

Purpose

- 1. Main Link EYE Diagram should meet TP3 point of VESA.
- 2. The measure method is through access fixture.

Appendix C

Impedance Profile through a DP Connector

Differential Impedance Profile Measurement Data Example

| Segment | Differential Impedance Value | Maximum Tolerance |
|-----------------|---------------------------------|-------------------|
| Fixture | 100Ω/85Ω VESA | ±10% |
| Connector | 100Ω/85Ω VESA | ±10% |
| Wire management | 100Ω/85Ω VESA | ±10% |
| Cable | 100Ω/85Ω VESA | ±5% |

Impedance Profile Values for Cable Assembly

Purpose

Cable Impedance Profile 100ohm for Cable Assembly

Appendix C

Main Link Pixel Freq information value of MSA data

Example:

| Freq | Cycle Time | PWM Rising Time | PWM Falling Time | |
|-------|------------|-----------------|------------------|--|
| 200Hz | 5ms | ≤1us | ≤1us | |
| 1KHz | 1ms | ≤200ns | ≤200ns | |

Purpose

- 1. LED driver need to calculate the duty cycle of input PWM signal.
- 2. To avoid backlight flicker visible on LCD, system input PWM suggest : PWM rising ≤ 200 ppm*cycle time ; PWM falling ≤ 200 ppm*cycle time.
